

A reliable integration platform for today's composable enterprise

Built on AWS serverless technology

The most cost-effective scalable integration platform. **Full stop.**

Customers are one click away from switching to your competitors, which means your organisation's technology stack needs to be responsive to changes in the market, able to scale and pivot almost instantaneously.

Built on AWS serverless technology, underpinned by composability principles and with the lowest total cost of ownership in the integration platform as a service (iPaaS) market, SiPHON's modularity empowers organisations to quickly connect disparate systems, consolidate data flows and tear down business silos.

//
SiPHON is almost infinitely scalable with
99.95%
guaranteed uptime

Composable enterprise

Connect existing systems, add new functions and desegregate data with a modular platform that gives you the flexibility to adapt and innovate in real time.

Scalability and guaranteed uptime

Built on AWS technology, SiPHON is almost infinitely scalable with 99.95% guaranteed uptime, ensuring your services will always be available for your customers.

A low-cost managed solution

With the lowest total cost of ownership in the iPaaS range, SiPHON is the best value integration platform on the market.

Key Features & Benefits

New products, fast to market

Unleash your data by bolting on new services and functions, enabling you to quickly and inexpensively develop new products and services without massive project spend.

Best price in the iPaaS range

Connect existing systems or extend functionality at the lowest total cost of ownership in the iPaaS range.

Near-infinite scalability

Adapt to the fluctuating demands of your customers with fully and instantly scalable compute power, improving system stability and making you more competitive.

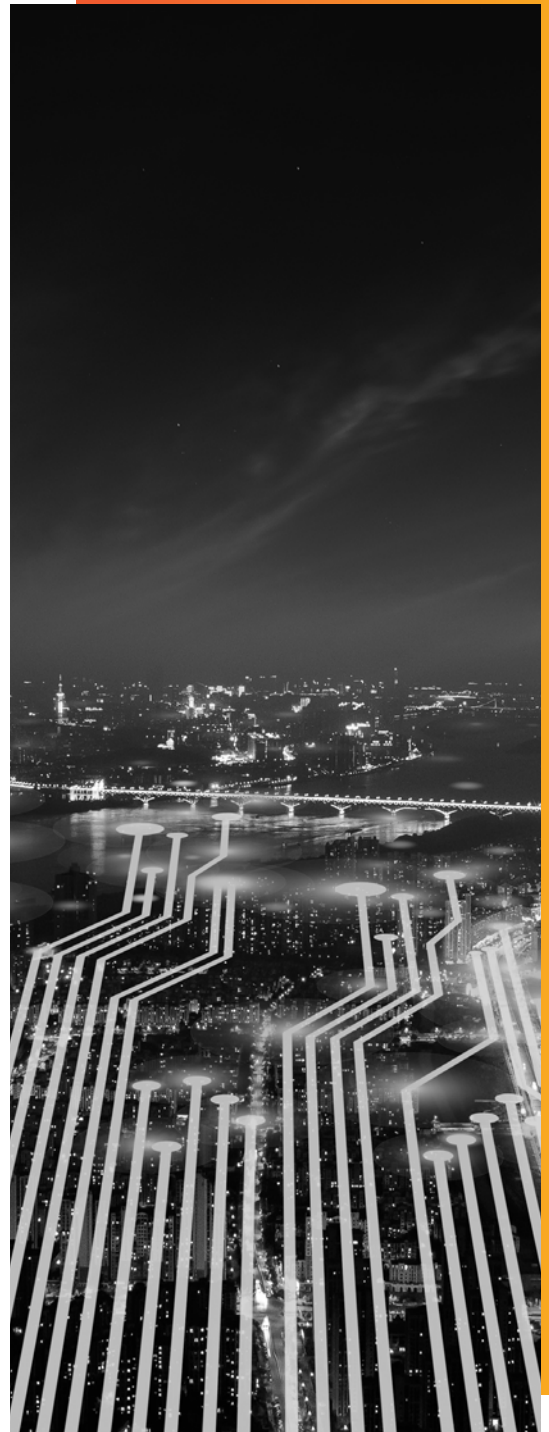

Guaranteed uptime

Downtime is death. Customers may soon become ex-customers when they're unable to access your services or products when and where they want them.

Retain business flexibility

A large transformation project may commit you to a technology roadmap you don't want to be on.

WHY SIPHON?

Traditional iPaaS and ESB solutions are expensive, slow to implement and costly to operate.

SiPHON is a managed platform that allows you to build and deploy business logic quickly and with infinite scale at a fraction of the price.

Are you ready to **integrate?**

Looking for a simple solution for all your applications to work together? SiPHON allows your system to integrate with another to ensure endless possibilities.

**300%
faster**
than Jitterbit

**80%
Cheaper**
than Mulesoft

Speed, Performance and Reliability

As professionals in the integration world, one of the problems we sought to solve was that speed sometimes came at a cost of data loss, and reliability came at a cost of performance. We built SiPHON with the core principle of “no message left behind”, regardless of how much data we throw at it, and regardless of how many processes are running simultaneously. The AWS Serverless backbone has allowed us to rewrite the rulebook on how reliability, performance and speed come together. No longer is there a compromise.

Higher availability and always on

Our SiPHON experts can help you find your perfect solution.
